

Retail Sales Performance Analysis

Business Problem - The analysis evaluates retail sales performance across **regions and product categories** using transaction-level data. The objective is to quantify revenue and sales volume and identify differences in revenue contribution across these business dimensions.

Stakeholder

The primary stakeholder is the **retail sales or business manager**, who can use the analysis to monitor sales performance and inform decisions concerning regional and product-category performance.

Decision

The analysis can support decisions on **where to focus sales attention and resources across regions and product categories**, based on their observed contribution to revenue.

Unit of Analysis

The **unit of analysis is an individual retail order or transaction**, with each row representing one customer order and its associated sales information.

Key Performance Indicators

- **Total Revenue: KES 3,206,450**
- **Total Units Sold: 906 units**
- **Average Transaction Value: KES 10,688.17**

Initial Findings

The analysis indicates variation in revenue contribution across both product categories and regions. **Electronics, Personal Care, and Home & Office** were the highest-revenue categories, each generating approximately **KES 920,000–930,000**, while **Accessories** generated approximately **KES 420,000**. Across regions, **Kisumu** recorded the highest revenue at approximately **KES 880,000**, followed by **Mombasa** at approximately **KES 800,000**. **Nakuru** and **Nairobi** recorded approximately **KES 780,000** and **KES 760,000**, respectively.

Limitation

The analysis is based on **300 transactions within the available dataset** and therefore provides a limited view of overall retail performance. The observed revenue differences describe **associations within the dataset but do not establish their underlying causes or long-term trends**. Additional variables, such as operating costs, inventory levels, customer characteristics, and a longer observation period, would be required for more comprehensive performance assessment.
